Here is the Title

First Author[1,*] and Co-Author(s)[2]

[1] *address of First Author*
[2] *address of Co-Author(s)*

Abstract. The abstract should provide the application context and briefly summarise the main findings. It should not be too long — normally no longer than half a page.

AMS subject classifications: XXX, XXX

Key words: At least 3 items and at most 5 items.

1 Introduction

The Introduction should provide details of the application context and previous relevant publications, leading to a brief summary of the direction of the research undertaken and the following structure of the article (Sections).

2 Preparation of Manuscript

For preparation of the manuscript we **strongly recommend** using `Instruction for Authors` file and examples provided there.

The Title Page should contain the article title, authors' names and complete affiliations, and the postal address for manuscript correspondence (including e-mail address). The Abstract should provide a brief summary of the main findings of the paper.

References should be listed at the end of the paper in alphabetical order according to the surnames of the first author, and should be cited in the text using `\cite` command as `\cite{coutsias1996,firstauthor,Berger,deBoor}`. In the text the citations will appear as [1–3, 5].

Abbreviations of titles of periodicals/books should be given by using Math. Reviews, see e.g. `https://mathscinet.ams.org/msnhtml/serials.pdf`

For unpublished lectures of symposia, include title of paper, name of sponsoring society in full, and date. Give titles of unpublished reports with "(unpublished)" following

---

*Corresponding author. *Email addresses:* `fauthor@edu.eajam` (F. Author), `Co-Auhor(s)@edu.eajam` (A. Co-Author)

the reference. Only articles that have been published or are in press should be included in the references. Unpublished results or personal communications should be cited as such in the text. Please note the sample at the end of this paper.

Equations should be typewritten whenever possible and the number placed in parentheses at the right margin. Reference to equations should use the form "Eq. (2.1)" or simply "(2.1)."

Figures should be in eps format. Number figures consecutively with Arabic numerals. Lettering on drawings should be of professional quality or generated by high-resolution computer graphics and must be large enough to withstand appropriate reduction for publication. For example, if you use MATLAB to do figure plots, axis labels should be at least point 18. Title should be 24 points or above. Tick marks labels better have 14 points or above. Line width should be 2 (or above).

Illustrations in colors will appear in black and white in printed version unless the authors defray the cost of color printing. At the Editor's discretion a limited number of color figures each year of special interest will be published (for printed version) at no cost to the author.

Acknowledgments
